project overview

MoodSphere is an emotional well-being and ambient interaction design project that explores how technology can help people become more aware of their emotions through subtle, sensory experiences.

goals

The primary goal of the MoodSphere app is to create a seamless and emotionally intelligent platform that helps users understand, track, and improve their emotional well-being in a gentle and engaging way.

problem statement

People often listen to music to match or change their mood, but most music apps don't truly understand how the listener feels. Users have to search and choose songs manually, which can be tiring when they just want music that fits their emotions.

solution

MoodSphere is a music app that connects emotions with sound. It allows users to select or express their current mood, and the app instantly creates a playlist that matches or improves that mood.

qualitative research data

How does music affect your mood during the day?

What type of music do you listen to when you feel sad or stressed?

How often do you use music to change or reflect your emotions?

What helps you choose a song that matches your mood?

answers

It helps me feel calm and focused.
I listen to soft or slow music when I'm sad or stressed.
Almost every day.
I choose songs that match how I feel.Too many options, hard to find mood-based songs.

quantitative research data

empathy map

says
"I want music that matches my mood."
"Finding the right song takes too much time."

thinks
"I don't want to spend time searching for music."
"I hope the app feels personal, not generic."

does
Scrolls through playlists to find songs that match emotions.
Uses music daily to relax, focus, or improve mood.

feels
Frustrated when music doesn't match mood.
Relaxed or happy when music fits emotions.

user persona

Name: Mia Thompson
Age: 25
Occupation: Graphic Designer
Location: Los Angeles
Tech Comfort: High

Bio:
Mia is a young professional who loves discovering new music and curating playlists for every mood—from working out to winding down after a long day. She streams music daily on her smartphone, follows trending artists, and enjoys sharing her favorite tracks with friends.

Goals:
1. *Discover new music that matches personal taste and mood.*
2. *Create and manage playlists for different activities (work, workout, party).*
3. *Share favorite tracks and playlists with friends easily.*

Pain Points:
1. *Overwhelmed by too many song recommendations that don't match taste.*
2. *Frustrated by frequent ads (for free-tier users).*
3. *Playlist management feels time-consuming or unintuitive.*
